Email. cardonna.sacha@gmail.com Website. sachacardonna.github.io

Current position

Ph.D. candidate in Mathematics.

10/2023 - Present

Institut Montpellierain Alexander Grothendieck – Montpellier, France.

Title. Numerical study of free-border problem and wave-structure interaction.

Advisors. François Vilar & Fabien Marche.

Funding. French ministry fellowship, ranked 1st at I2S Doctoral School admission exam.

Research interests

Models.

Conservation laws,
Hyperbolic systems,
Models coupling.

Numerics.

DG & FV methods,
Well-balanced schemes,
ALE approaches.

Applications.

Fluid mechanics,
Nonlinear Shallow-Water,
Dispersive PDEs.

Scientific computing.

O.-O. programming,
Generical programming,
Parallel computing.

Education

Graduate studies in Mathematics.

09/2020 - 06/2023

Faculty of Sciences – Montpellier, France.

Master's Degree in Theoretical and Numerical Analysis of PDEs (*with honours*).

Master's Degree in Fundamental Mathematics.

Highlights. 1st in Theoretical Analysis, Numerical Analysis, Research Traineeship, a Posteriori Estimates courses.

Rank. Valedictorian.

Undergraduate studies in Mathematics & Physics.

09/2017 - 05/2020

Faculty of Sciences – Montpellier, France.

Bachelor's Degree in Pure and Applied Mathematics (*with honours*).

Associate's Degree in Mathematics & Physics (*with honours*).

Highlights. 1st in Numerical Analysis of ODEs, Convex Optimization & Classical Mechanics courses.

Rank. Consistently ranked in the top 10 %.

Work experiences

Ph.D. candidate & teaching assistant.

10/2023 - Present

IMAG & Engineering School Polytech Montpellier – Montpellier, France.

Research intern.

03 - 07/2023

Institut Montpellierain Alexander Grothendieck – Montpellier, France.

Private tutor in Sciences.

07/2017 - 05/2023

Face-to-face and remote courses – Salon-de-Provence & Montpellier, France.

Teaching activities

Preparatory cycle mathematics (2nd year B.Sc.)

2023 - 2024

Engineering School Polytech – Montpellier, France.

Description. The preparatory cycle at Polytech Montpellier is tailored to prepare students for the pursuit of an engineering degree within any specialized field available in France. Mathematics courses are intentionally designed to be both comprehensive and profound, with a particular focus on students who aspire to explore theoretical domains such as mathematical engineering, physics, and mechanics.

Topics. Differential calculus, topology, bilinear algebra, probability.

Supervised mathematical assignments (2nd year B.Sc.)

2023 - 2024

Engineering School Polytech – Montpellier, France.

Description. Supervised assignments is a specific system for students following the preparatory cycle in Polytech Montpellier, allowing them to assimilate the educational content provided by developing their autonomy and their capacity for self-assessment. Each week, students are placed in exam conditions with a subject to be covered in two hours. Teachers are there to guide them, help them overcome their difficulties and possibly become aware of their shortcomings.

Internships

Finite-Volume Subcells correction on discontinuous Galerkin schemes.

03 - 07/2023

Building and implementing a new strategy for stabilizing discontinuous Galerkin numerical methods using a Finite-Volume subcells type approach for the Nonlinear Shallow-Water equations. We consider here an a priori approach, more precisely a monolithic subcell dG/FV convex property preserving scheme.

Advisors. François Vilar & Fabien Marche.

Asymptotic analysis of PDEs sequences and homogenization theory.

02 - 05/2022

We consider two problems, including a Dirichlet problem on a variable open set. Ice fog forms when water vapour, mainly resulting from human activities, enters the atmosphere. This vapor condenses into droplets which quickly freeze, giving rise to particles of ice without a well-defined crystalline form. The objective is to model it as a homogenization problem.

Advisor. Michel Bellieud.

From differential geometry to mathematical billiards.

03 - 05/2021

Studying one of the simplest dynamical system, the mathematical billiard where we characterize the periodic trajectories by their initial angle of shot.

Advisor. Daniel Massart.

Proof of Dirichlet Prime Number theorem.

01 - 04/2020

Demonstrating that, for $a, b \in \mathbb{N}^*$, such that $\gcd(a, b) = 1$, the arithmetic progression $\{an + b\}_{n \in \mathbb{N}}$ contains an infinity of prime numbers. Such a proof needs various theories, like complex analysis or group theory.

Advisor. Sylvain Brochard.

Responsabilities

Student Representative of Master's Degree in Applied Mathematics.

2023 - 2024

Representing students in various reunions of development council, in order to convey student comments and improve the formation.

Computer skills

Programming	C/C++, Python, notions of Fortran.
Mathematics softwares	FreeFEM++, Matlab, Scilab, gnuplot, Maple, Mathematica.
Markup languages	HTML, CSS, PHP.
Typesetting systems	L ^A T _E X, Beamer, Microsoft Office (<i>Word & PowerPoint</i>).
Operating systems	Linux (<i>Kali & Debian</i>), Windows, macOS.
Creation softwares	Adobe Creative Cloud, Audacity, Final Cut Pro X.

Projects

Hybrid High-Order method on Leray-Lions operators.

12/2022

Advanced Numerical Analysis, introduction to Hybrid High-Order method course.

Studying a new non-conform finite-element method called Hybrid High-Order and its main discrete functional analysis results on Leray-Lions operators.

Advisor. Daniele Di Pietro.

Müller's SPH C++ implementation for fluid dynamics.

11/2022

A Posteriori Estimates & Mesh Adaption course.

Building and implementing Smooth Particle Hydrodynamics method for a C++ simulation.

Advisor. Bijan Mohammadi.

Some results about measure theory.

05 - 09/2022

Personal project lead during summer break.

Proving measure theory results, including differentiation of Radon measures, Besicovitch & Vitali covering theorems, Tietze & Lusin's theorems.

Advisor. Michel Bellieud.

Finite-element resolution and FreeFEM++ simulation.

05 - 04/2022

Numerical Analysis, introduction to Finite-Element method course.

Studying and implementing a Dirichlet problem with mixed boundary conditions on FreeFEM++.

Advisor. Vanessa Lleras.

Machine Learning code for database analysis.

10/2021

Machine Learning & Convex Optimization course.

Database analysis and programming regression methods for machine learning on Python.

Advisor. Bijan Mohammadi.

Numerical interpolation and its limits.

2018

Personal project lead during associate's degree.

Studying polynomial interpolation and Runge's phenomenon.

Advisor. Sylvain Brochard.

Courses taken

Fundamental courses. Theoretical Analysis of PDEs – Functional Analysis & Distribution Theory – Differential Geometry – Measure and Integration Theory – Complex Analysis – Topology of Metric Spaces – Galois Theory – Category Theory – Ring & Group Theory – Differential Equations & Calculus – Probability Theory – Euclidian Geometry – Linear & Bilinear Algebra – Real Analysis – Calculus.

Applied and specialized courses. Numerical Analysis of PDEs – Numerical Modeling – Homogenization for Navier-Stokes – Scientific Computing – Machine Learning & Convex Optimization – *A Posteriori* Estimates & Mesh Adaption – Fourier Transform & Convolution for Inverse Problems – Deterministic & Stochastic Modeling.

Physics courses. Solid & Fluid Mechanics – Electromagnetism – Electrostatics & Magnetostatics – Thermodynamics – Wave & Geometrical Optics – Electrohydrodynamics – Experimental Physics.

Languages

French (*native*), **English** (*fluent*), **Spanish** (*intermediate*).

Last update. Tuesday 3rd October, 2023.
